

African genus *Manticora*, represented on the plains of New Mexico by a cognate genus, *Omus*; and on the sandy plains of Chili, the insects much resemble those of Africa, a very considerable portion of the *Coleoptera* being heteromorous. I am indebted for this information to my kind friend Mr. Walker, who also informs me that many insects from the extreme southern part of America nearly resemble our own. This is exactly what we should be led to infer from the nature of the climate, which may be called insular with as much propriety as that of our own country.

And now, reader, farewell! I doubt not that thou hast found many an error in this paper, and hast often exclaimed—

“Tramite quo tendis majoraque viribus audes,”

or something of that sort. These I trust that thou wilt pardon; and I promise that I will not often, in this way at least, intrude upon thee again; perhaps never, unless those visions should be realized which have been to me “like the vapour of the plains, which the thirsty traveller thinketh to be water, but when he cometh to it he findeth nothing.”

Vale!

Δ.

ART. XXVII.—*Monographia Chalciditum.* By FRANCIS WALKER.

(Continued from p. 179.)

“—— the green myriads in the peopled grass.”

*Family, PTEROMALIDÆ.*

Corpus plerumque metallicolor aut nigrum: caput et thorax pubescens, quasi squamea, nunquam aut rarissime colore pallido variegata: caput breve, transversum, thoracis latitudine, mari sæpè magnum thorace latius: oculi medios, laterales: ocelli 3, supra verticem trigonè dispositi: os occultum: mandibulæ parvæ:

palpi plerumque simplices, *mari* rarissimè dilatati aut fissi : antennæ articulis 13, nonnunquam 12, rarissimè 11, *mari* plerumque filiformes corporis longitudine, *fem.* plerumque clavatae corpore breviores, simplices, plus minusve pubescentes ; articuli approximati, sublineares ; 1<sup>us.</sup> longus ; 2<sup>us.</sup> cyathiformis ; clava triarticulata : thorax varius : mesothorax plerumque ejus ferè totum occupans : abdomen sessile, quasi subtilissimè squameum, supra planum, *maris* rotundum lineare aut spathuliforme, *fem.* ovatum sublineare aut basi latum inde ad apicem gradatim acuminatum : oviductus carinula ventrali receptus, nonnumquam sub-exertus et vaginis duabus lateralibus reconditus : pedes mediocres, sub-æquales, pubescentes ; coxae parvae ; tibiæ rectæ, apice spinis armatæ, *mari* nonnunquam dilatatae ; tarsi graciles, articuli 1°. ad 4<sup>um.</sup> longitudine decrescentes ; 5<sup>us.</sup> 4°. longior ; unguis et pulvilli parvi : alæ plerumque amplæ, pubescentes, iridescentes ; pro-alæ nervo unico solito, cuius humeralis ulnari longior, radialis sat longa stigmate terminata ; metalæ nervo unico simplici, costæ medium attingente.

Metamorphosin in *Lepidopterorum*, aut rariùs *Muscidum* et *Tenthredinidum*, pupis subeunt ; nonnullæ ad *Cleonymum* propinquæ *Coleoptera* lignivora (*Anobium Hylurgum* et *Hylesinum*) diruunt. *Mares* sæpè colore læto abdomeque flavo maculato gaudent ; *feminæ* obscuriores, abdome rarissimè maculato. Characteres quibus *Chalciditum* tarsis 5 articulatis familiæ discrepant breviter memorabo. *Spalangiidum* caput planum ; *Eurytomidum* corpus gibbosum aut cylindricum ; *Chalcididum* et *Leucopsidum* meta-femora incrassata ; *Torymidum* et *Perilampidum* nervus cubitalis brevissimus ; *Miscogasteridum* abdomen petiolatum ; *Ormoceridum* antennæ moniliformes ; *Pteromalidum* abdomen sessile et planum ; *Cleonymidum* thoracis structura propria ; *Eupelmidum* et *Encyrtidum* mesotarsi dilatati ; *Aphelinidum* antennæ articulis paucis.

The genus *Pteromalus* was named and characterized by Swederus in the Stockholm Transactions, where fifteen species are described, which, with the exception of two or three, have been since removed to other genera. His first species, *P. puparum*, is very abundant, and has been often described by entomologists : from one to two hundred specimens of it are found in a single chrysalis of the common white or tortoiseshell butterfly (*Pontia Brassicæ* and *Vanessa Urticæ*). It is often difficult to identify the species of this family, for the males and females generally differ entirely in form and colour, and, like the *Ichneumonites*, the latter are either the most numerous

in individuals, or are oftener met with, being constantly engaged in search of chrysalises wherein to deposit their eggs. They comprise by far the greater part of the pentamerous *Chalcidites*. The parts of the mouth do not vary much. Generally the *prothorax* and the *metathorax* are very small, and the sutures between the *parapsides* and the *scutum* of the *mesothorax* indistinct. The first and last divisions depart from this structure; the first resembles many of the *Miscogasteridæ* and *Ormoceridæ*, the last is allied to the *Cleonymidæ*.

The principal divisions are the following :—

\* *Prothorax brevissimus, transversus.*

† *Mesothoracis parapsides scuto discretæ.*

†† *Mesothoracis parapsides scuto ferè in unum confusæ.*

<sup>+</sup> Antennæ 11-articulatæ.

**++ Antennæ 12-articulatæ.**

**+++ Antennæ 13-articulatæ.**

~~+~~ Antennæ articulo 3<sup>o</sup>. vix conspicuo, 4<sup>o</sup>. minimo, 5<sup>o</sup>. parvo;

$\times \times$  Antennæ articulo 3<sup>o</sup>. et 4<sup>o</sup>. minimis, 5<sup>o</sup>. mediocri.

\*\* *Prothorax productus*, anticè *angustus*.

\* *Prothorax brevissimus, transversus.*

† *Mesothoracis parapsides scuto discretæ.*

Antennæ	13-articulatæ . . . . .	I. Seladerma.
	12-articulatæ. Thorax punctis majoribus . . . . .	II. Semiotus. III. Systasis.

## GENUS I. SELADERMA,<sup>a</sup> Walker.

*Fem.*—Caput mediocre, thorace vix latius: mandibulæ elongato-subquadratae, paullò arcuatæ, tridentatae, similes; dens externus et medius acuminati; internus latus, obtusus: maxillæ elongatae, subarcuatæ, ciliatae, quqæue internè apicem versus in lobum producta; palpi sat longi, 4-articulati, subfiliformes; articulus 1<sup>us</sup>. mediocris; 2<sup>us</sup>. paullò longior; 3<sup>us</sup>. 1<sup>o</sup>. æqualis; 4<sup>us</sup>. 2<sup>o</sup>. longior fusiformis: mentum elongato-ovatum, basi emarginatum: labium breve, latum, apice ciliatum; palpi 3-articulati, breves; articulus 1<sup>us</sup>. mediocris; 2<sup>us</sup>. brevis; 3<sup>us</sup>. 1<sup>o</sup>. paullò longior crassus acumi-

<sup>a</sup> Σέλας splendor, δέρμα cutis.

natus : antennæ corporis dimidio æquales aut paullò longiores, subclavatae, pubescentes ; articulus 1<sup>us</sup>. gracilis, filiformis ; 2<sup>us</sup>. mediocris ; 3<sup>us</sup>. et 4<sup>us</sup>. minimi ; 5<sup>us</sup>. et sequentes ad 10<sup>um</sup>. gradatim breviores et latiores ; clava ovata, articulis 9<sup>o</sup>. et 10<sup>o</sup>. paullò longior et latior : thorax ovatus, quasi planè squameus ; prothorax minimus, supra vix conspicuus ; parapsides convexæ scuto valdè distinctæ, scutellum conicum, paraptera et epimera benè determinata ; metathorax mediocris : abdomen ovatum aut elongato-ovatum, ferè lœve, subtus angulatum ; segmentum 1<sup>um</sup>. magnum ; sequentia breviora, subæqualia : oviductus occultus : femora et tibiæ gracilia : alæ amplæ ; nervus cubitalis ferè alæ apicem attingens ; stigma ramulum brevissimum, nonnunquam ferè obsoletum emittens.

Sp. 1. Sel. lœtum. Fem. *Viride, antennis nigris, pedibus rufis, femoribus fuscis, alis subfuscis.*

Viride, nitens, sparsè pubescens : oculi ocellique rufi : antennæ nigrae, corporis dimidio longiores ; articulus 1<sup>us</sup>. obscurè rufus, apice niger : thoracis segmentorum margines nonnunquam æneo-virides : abdomen nonnunquam cyaneo- aut æneo-viride, subtus valde angulatum : pedes obscurè rufi ; coxae virides ; trochanteres et femora fusca, hæ apice basique rufa ; tarsi apice, ungues et pulvilli fusi ; protarsi pallidè fusi : alæ subfuscæ ; squamulæ fuscæ ; nervi nigro-fusi ; stigma parvum ; metalarum nervi pallidiores. (Corp. long. 1 $\frac{1}{3}$ —1 $\frac{3}{4}$  lin. ; alar. 2 $\frac{1}{2}$ —3 lin.)

Var. β.—Minus : thoracis segmenta nonnulla cyaneo-viridia : abdomen viridi-cyanum : femora, trochanteres et protarsi rufa, illa supra fusco vittata.—Species distincta. ?

July ; on grass beneath trees ; near London.

Sp. 2. Sel. bicolor. Fem. *Viride, abdomine cupreo, antennis nigris, pedibus rufis, alis subfuscis.*

Viride, nitens, sparsè pubescens : oculi ocellique rufi : antennæ nigrae, corporis dimidio non longiores ; articulus 1<sup>us</sup>. rufus ; 2<sup>us</sup>. obscurè fuscus : thoracis segmentorum margines nonnulli æneo-virides : abdomen cupreum, *S. lœto brevius* et *convexus*, subtus valdè angulatum ; segmentum 1<sup>um</sup>. lœtè viride, apice cuprenum : pedes lœtè rufi ; coxae virides ; ungues et pulvilli fusi : alæ subfuscæ ; squamulæ et nervi fusca ; stigma parvum ; metalarum nervi pallidiores. (Corp. long. 1 $\frac{1}{4}$ —1 $\frac{1}{3}$  lin. ; alar. 2 $\frac{1}{3}$ —2 $\frac{1}{2}$  lin.)

June, July ; on grass beneath trees ; near London.

Sp. 3. Sel. convexum. Fem. *Cyaneo-viride, antennis nigris, pedibus fuscis, femoribus viridibus, alis subhyalinis.*

*Cyaneo-viride*, nitens, sparsè pubescens : caput viride : oculi ocellique rufi : antennæ nigræ, corporis dimidio vix longiores ; articulus 1<sup>us</sup>. viridis : mesothoracis parapsides et scutum anticè purpurea : abdomen cyaneo-viride, subtus valde angulatum, eodem longitudine quod *S. bicolor* ; discus æneo-viridis ; segmentum 1<sup>um</sup>. purpureo-cyanum : pedes fusci ; coxæ et femora viridia, hæ apice basique rufa ; tibiæ basi et subtus, metatibiæ ferè totæ, rufæ ; meso- et metatarsi rufo-fusci, apice fusci : alæ subhyalinæ ; squamulæ et nervi fusca ; stigma mediocre ; metalarum nervi pallidiores. (Corp. long. 1 $\frac{5}{4}$  lin. ; alar. 2 $\frac{1}{2}$  lin.)

July ; on grass beneath trees ; near London.

Sp. 4. Sel. breve. Fem. *Aureo-viride, antennis nigris, pedibus rufis, femoribus basi fuscis, alis hyalinis.*

Præcedentibus brevius et latius, lætè aureo-viride, sparsè pubescens : oculi ocellique rufi : antennæ nigræ, corporis dimidio paullò longiores ; articulus 1<sup>us</sup>. viridis : abdomen subtus angulatum : pedes rufi ; coxæ virides ; femora basi fusca ; meso- et metatarsi apice, unguis et pulvilli fusci : alæ hyalinæ ; squamulæ fuscae ; nervi nigro-fusci ; stigma mediocre ; metalarum nervi pallidiores. (Corp. long. 1 $\frac{1}{4}$  lin. ; alar. 2 $\frac{1}{2}$  lin.)

July ; on grass beneath trees ; near London.

## GENUS II.—SEMIOTUS,<sup>b</sup> *Walker.*

Corpus pubescens : caput mediocre, thorace vix latius : mandibulæ subquadratae, ferè rectæ, similes, dentibus 3 parvis acutis armatae ; dens internus latus : maxillæ elongatae, subarcuatæ quæque internè apicem versus in lobum producta ; palpi 4-articulati, breves, ad apices gradatim crassiores ; articulus 1<sup>us</sup>. et 2<sup>us</sup>. mediocres, subæquales ; 3<sup>us</sup>. paullò longior ; 4<sup>us</sup>. 3<sup>o</sup>. paullò longior, elongato-ovatus : mentum breve, conicum : labium parvum, quasi fissum ; palpi 3-articulati, brevissimi, filiformes ; articuli subæquales : antennæ 12-articulatae, *mari* ferè filiformes corporis dimidio longiores, *fem.* plus minusve clavatae corporis dimidii longitudine aut paullò breviores ; articulus 1<sup>us</sup>. gracilis, filiformis ; 2<sup>us</sup>. brevis ; 5<sup>us</sup>. et sequentes ad 9<sup>um</sup>. lineares longitudine decrescentes ; *mari*

<sup>b</sup> σημειωτός, signatus.

clava sublinearis, articulis 8°. et 9°. paullò longior et latior; *fem.* clava elongato-ovata, articulis 8°. et 9°. latior et paullò longior: thorax ovatus, quasi planè squameus, punctis majoribus aspersus: prothorax minimus, supra vix conspicuus: mesothorax magnus; parapsides benè determinatæ, scuto distinctæ; paraptera et epimera parva; scutellum apice subacuminatum: metathorax mediocres: *mari* abdomen elongato-ovatum, ferè lave; segmentum 1<sup>um</sup>. magnum; sequentia breviora, subæqualia: sexualia exerta, abdominis dimidio nonnunquam vix breviora: *fem.* abdomen ovatum, plus minusve elongatum et acuminatum, subtus angulatum, non compressum: pedes graciles; tibiæ simplices: alæ mediocres; nervus radialis cubitali paullò longior, humeralis prope apicem ramulum rejiciens brevissimum sed benè determinatum; stigma ramulum brevissimum nonnunquam ferè obsoletum emittens.

Sp. 1. Sem. mundus. Mas et Fem. *Viridis, pedibus rufis, alis hyalinis.*

*Mas.*—*Viridis*: caput posticè aeneo-viride: oculi ocellique rufi: antennæ nigræ: abdomen viridi-cupreum, basi et utrinque viride: sexualia nigra, apice fusca: pedes rufi; coxæ virides; femora basi nigra; tarsi pallidè rufi, apice neenon ungues et pulvilli fusci; protarsi pallidè fusci: alæ hyalinæ; squamulæ et nervi pallidè fusca: stigma minimum; metalarum nervi flavi.

*Fem.*—Antennæ clavatae, corporis dimidii longitudine; articulus 1<sup>us</sup>. flavus, apice et supra nigro-fuscus: abdomen nigro-viride, elongato-ovatum, basi cupreo-viride nitentius, subtus angulatum aeneum, apice paullò attenuatum: pedes pallidè rufi; coxæ virides; meso- et metatarsi flavi; ungues et pulvilli fusci. (Corp. long. 1 $\frac{1}{4}$ —1 $\frac{1}{2}$  lin.; alar. 1 $\frac{5}{4}$ —2 lin.)

July; on grass beneath trees; near London.

Sp. 2. Sem. clarus. Mas et Fem. *Præcedenti minor, fem. abdomine longiore, alarum nervis obscurioribus.*

*Mas.*—*Viridis*: oculi ocellique rufi: antennæ nigræ: abdomen cupreum; latera et apex viridia: sexualia nigra, apice fusca: pedes rufi; coxæ virides; femora basi nigra; meso- et metatarsi flavi; ungues et pulvilli fusci: alæ hyalinæ; nervi et squamulæ fusca; stigma parvum; metalarum nervi pallidi.

*Fem.*—Antennæ clavatae, corporis dimidio breviores: abdomen cyaneo-viride, elongato-ovatum, subtus angulatum, apice attenuatum:

femora basi et coxae viridia; meso- et metatarsi apice fuscæ.  
(Corp. long. 1— $1\frac{1}{2}$  lin.; alar.  $1\frac{1}{2}$ — $1\frac{3}{4}$  lin.)

*Var. β.—Mas*, æneo-viridis.

*Var. γ.—Mas*, meso- et metafemora nigra, apice rufa; meso- et metatibiæ apice pallidè fuscæ.

June and August; on grass beneath trees; near London.

Sp. 3. Sem. tarsalis. Mas et Fem. *Viridis, pedibus fuscis, tarsis pallidis, alis hyalinis.*

*Mas.—Viridis*: oculi ocellique rufi: antennæ nigræ: abdomen cupreum, basi apice et utrinque viride: sexualia nigra, apice fusca: pedes rufi; coxae virides; femora basi nigra; metafemora ferè omnino nigra; metatibiæ fuscæ, basi rufæ; tarsi straminei, apice necnon unguis et pulvilli fuscæ; protarsi pallidè fuscæ: alæ hyalinæ; squamulæ et nervi fuscæ; stigma parvum; metalarum nervi pallidiores.

*Fem.—Antennæ subclavatae*, corporis dimidio vix longiores: abdomen viridi-cupreum, elongato-ovatum, apice paullò acuminatum: femora, meso- et metatibiæ rufa, fusco cingulata; meso- et metatarsi flavi, apice fuscæ. (Corp. long.  $\frac{1}{2}$ —1 lin.; alar. 1— $1\frac{3}{4}$  lin.)

*Var. β.—Mas*, mesothoracis scutum viridi-æneum.

*Var. γ.—Mas*, pro- et mesotibiæ pallidè fuscæ; metatibiæ obscuriores.

*Var. δ.—Mas*, femora omnia nigra, apice rufa; meso- et metatibiæ fuscæ.

*Var. ε.—Mas*, metafemora omnino nigra; tibiæ nigro-fuscæ; protibiae fuscæ; meso- et metatarsi flavi, apice fuscæ.

*Var. ζ.—Mas*, protarsi rufi; meso- et metatarsi flavi.

*Var. η.—Mas*, abdomen purpureo-cupreum: tibiæ nigræ; protibiae rufæ, fusco cingulatae.

*Var. θ.—Mas*, meso- et metatarsi pallidè fuscæ.

July; on grass beneath trees; near London. June; Windsor Forest.

Sp. 4. Sem. Scoticus. Fem. *Aeneo-viridis, pedibus rufis, alis subhyalinis.*

*Aeneo-viridis*: caput obscurè viride: oculi ocellique rufi: antennæ nigræ; clava articulo 9°. multò latior: thoracis puncta majora vix conspicua: abdomen viride elongato-ovatum, basi æneo-viride

nitentius, subtus angulatum aeneum, apice non attenuatum : pedes rufi ; coxae virides ; femora fusco cingulata ; unguis et pulvilli fuscæ : alæ subhyalinæ ; nervi et squamulæ pallidè fusa ; stigma minimum ; metalarum nervi pallidiores. (Corp. long.  $1\frac{1}{2}$  lin. ; alar. 2 lin.)

New Lanark, Scotland.

Sp. 5. Sem. varians. Mas et Fem. *Viridis, præcedenti brevior, pedibus fuscorufis, alis subfuscis.*

*Mas.* — Obscurè viridis : oculi ocellique rufi : antennæ nigræ : abdomen nigro-cupreum, basi et utrinque viride : sexualia nigra, apice fusa : pedes fuscæ ; coxae virides ; trochanteres, femora apice, tibiæ basi tarsique flava ; tarsi basi et apice, unguis et pulvilli fuscæ : alæ subfuscæ ; squamulæ et nervi fusa ; stigma parvum ; metalarum nervi pallidè fuscæ.

*Fem.* — *Viridis* : antennæ clavatae : abdomen nigro-viride, elongato-ovatum, basi aeneo-viride, subtus angulatum aeneum, apice vix attenuatum : pedes pallidè rufi ; coxae virides ; femora basi viridia ; meso- et metatarsi flavi ; unguis et pulvilli fuscæ. (Corp. long.  $\frac{5}{4}$ — $1\frac{1}{4}$  lin. ; alar.  $1\frac{1}{3}$ —2 lin.)

*Var. β.* — *Mas*, meso- et metatarsi basi flavi.

*Var. γ.* — *Mas*, femora nigro-fusa, apice flava ; tarsi flavi, apice fuscæ.

*Var. δ.* — *Mas*, protibiae rufæ ; tarsi flavi, apice fuscæ ; protarsi pallidè fuscæ.

*Var. ε.* — *Fem.* abdomen omnino aeneo-viride.

*Var. ζ.* — *Fem.* protarsi fuscæ.

*Var. η.* — *Fem.* thorax viridi-aeneus : tarsi omnes pallidè rufi.

*Var. θ.* — *Fem.* abdomen cupreum, viridi marginatum : antennæ articulo 1°. basi rufo.

June ; on grass beneath trees ; near London. July ; near Clermont, Auvergne.

Sp. 6. Sem. præstans. Mas et Fem. *Ænco-viridis, pedibus rufis aut flavis, alis subfuscis, S. Scoto clava angustiore S. variante alis latioribus discrepans.*

*Mas.* — *Viridis* : oculi ocellique rufi : antennæ nigræ : caput posticè et mesothoracis scutum anticè aeneo-viridia : abdomen cupreum, basi et utrinque viride : sexualia nigra, apice fusa : pedes rufi ; coxae virides ; femora basi nigra ; meso- et metatibiae et protarsi

pallidè fusca; unguis et pulvilli fuscæ; alæ subfuscæ; nervi et squamulæ nigro-fusca; stigma parvum; metalarum nervi pallidi.

*Fem.*—Antennæ clavatæ: abdomen viride, ovatum, basi æneo-viride nitentius, subtus paullò angulatum, apice acuminatum sed vix attenuatum: femora basi viridia; tibiae et protarsi rufa; meso- et metatarsi flavi: pro-alarum nervi fuscæ. (Corp. long. 1— $1\frac{1}{2}$  lin.; alar.  $1\frac{1}{2}$ —2 lin.)

*Var. β.*—*Mas*, viridis: abdomen cupreum, basi æneo-viride: tibiæ omnes et protarsi rufa; meso- et metatarsi flavi.

*Var. γ.*—*Mas*, femora et protarsi fusca, illa apice flava.

*Var. δ.*—*Mas*, *Var. β.* similis: abdomen æneum, basi viride nitentius: meso- et metatarsi apice fuscæ.

*Var. ε.*—*Mas*, abdominis discus obscurè cupreus: pedes flavi; coxæ virides; femora basi nigra; meso- et metatarsi straminei, apice neenon unguis pulvilli et protarsi omnino fuscæ.

July; on grass beneath trees; near London. June; New Forest, Hampshire.

Sp. 7. Sem. diversus. *Mas* et *Fem.* *Viridis*, *pedibus rufis, alis fuscis*, S. variante et præstante fem. *abdomine longiore et angustiore discrepans*.

*Mas.*—*Viridis*: oculi ocellique rufi: antennæ nigræ, graciles: abdomen basi nitentius: sexualia nigra, apice fusca: pedes rufi; coxæ virides; femora basi fusca; meso- et metatarsi apice, unguis et pulvilli fuscæ: alæ fuscæ; squamulæ et nervi obscuriora; stigma parvum; metalarum nervi pallidi.

*Fem.*—Antennæ clavatæ, corporis dimidio breviores: abdomen æneo-viride, elongato-ovatum, angustum, subtus paullò angulatum, apice acuminatum et attenuatum: oviductus rufus: pedes rufi; coxæ et femora basi viridia; meso- et metatarsi pallidè rufi; unguis et pulvilli fuscæ. (Corp. long. 1— $1\frac{2}{3}$  lin.; alar.  $1\frac{1}{4}$ — $1\frac{5}{6}$  lin.)

*Var. δ.*—*Fem.* caput et thorax aeneo-viridia; antennæ articulo 1°. nigro.

*Var. ε.*—*Fem.* caput et thorax cupreo nitentia: antennæ articulo 1°. nigro, basi fuscæ: abdomen apice aeneum: meso- et metatibiæ rufo-fuscae.

*Var. ζ.*—*Fem.* abdomen cupreum, basi aeneo-viride nitentius.

*Var. η.*—*Fem.* thoracis latera et abdomen viridi-aenea.

*Var. θ.*—*Fem.* viridis: antennæ totæ nigræ, femora basi viridia.

June; on grass beneath trees; near London.

Sp. 9. Sem. mærens. Mas. *Obscurè viridis, pedibus flavis, alis griseis.*

*Obscurè viridis*, longus, sublinearis: oculi ocellique rufi: antennæ nigræ: sexualia nigra, apice fusca: pedes flavi; coxæ virides; femora basi fusca; unguis et pulvilli fusci: alæ griseæ; squamulæ et nervi obscurè fusca; stigma parvum; metalarum nervi pallidi. (Corp. long.  $1$ — $1\frac{1}{4}$  lin.; alar.  $1\frac{1}{2}$ — $1\frac{5}{4}$  lin.)

*Var. β.*—Æneo-viridis: femora nigra, apice flava; tibiæ pallidè fuscae.

*Var. γ.*—Femora nigra; tibiæ fuscae, basi flavæ; tarsi apice fusci.

*Var. δ.*—Tibiæ nigro-fuscae; protibiæ et protarsi pallidè fusca.

*Var. ε.*—Pedes rufi; femora basi et coxæ viridia; meso- et meta-

tibiae nigro-fuscæ, basi rufæ; mcsø- et metatarsi pallidè flavi, apice rufi.

June; on grass; Windsor Forest, New Forest. September; near Linton, North Devon.

### GENUS III. SYSTASIS,<sup>c</sup> Walker.

Corpus crassum, breve: caput mediocre, thoracis latitudine: mandibulæ breves, subquadratae, similes, dentibus 3 vix acutis armatae; dens externus et medius parvi, internus minimus: maxillæ elongatae, subarcuatæ, quæque internè apicem versus in lobum producta; palpi 4-articulati, breves, ad apices gradatim crassiores; articulus 1<sup>us</sup>. mediocris; 2<sup>us</sup>. paullò longior; 3<sup>us</sup>. 1°. æqualis; 4<sup>us</sup>. 2°. paullò longior elongato-ovatus: mentum conicum: labium parvum, quasi fissum; palpi 3-articulati, brevissimi, crassi, subfiliformes; articuli subæquales, 3<sup>us</sup>. acuminatus: antennæ 12-articulatae, *mari* subfiliformes, *fem.* clavatae crassiores, corporis dimidio vix longiores; articulus 1<sup>us</sup>. linearis, longitudine triens; 2<sup>us</sup>. mediocris; 5<sup>us</sup>. et sequentes ad 9<sup>um</sup>. subæquales; clava elongato-ovata, articulis 8°. et 9°. longior et *fem.* latior: thorax convexus, brevis, ovatus: pro- et metathorax minimi, supra vix conspicui: mesothoracis scutum, scutellum, parapsides et paraptera benè determinata: abdomen breve, ovatum aut ferè rotundum, supra planum, *fem.* subtus carinatum et angulatum, *mari* angustius, apice vix acuminatum; segmentum 1<sup>um</sup>. magnum; sequentia breviora, sub-æqualia: oviductus non exertus: pedes graciles, simplices: alæ latæ, sat longæ; nervus humeralis ulnari longior ramulum rejiciens nullum, cubitalis radiali vix brevior stigmate rotundo terminatus: metalæ nervo unico simplici solito.

Sp 1. Syst. encyrtoides. Mas et Fem. *Viridis, antennis nigris, pedibus viridibus, tarsis flavis aut fuscis, alis hyalinis, nervo humerali ramulum rejiciente nullum.*

*Mas.*—Lætè viridis, nitens, quasi minutè squameus: oculi ocellique rufi: antennæ nigræ; articulus 1<sup>us</sup>. viridis: abdomen ferè læve, basi æneo-viride nitentius: pedes virides; trochanteres nigro-fusci; genua rufa; tarsi flavi, apice fusci; articulus 5<sup>us</sup>., unguis et pulvilli nigro-fusci; protarsi fusci: alæ hyalinæ; nervi et squamulae nigro-fusca; stigma parvum; metalarum nervi pallidi.

*Fem.*—Mesothoracis scutellum cupreo-vittatum: abdomen basi

<sup>c</sup> σύστασις, cohaerentia.

cupreo-viride; segmenta basi ænea: tarsi flavi; protarsi rufi; omnium articulus 5<sup>us</sup>. nigro-fuscus. (Corp. long.  $\frac{5}{4}$ — $1\frac{1}{4}$  lin.; alar.  $1\frac{1}{2}$ —2 lin.)

*Var. β.*—*Fem.* scutelli vitta vix conspicua: abdomen basi æneo-viride: protarsi fusci.

*Var. γ.*—*Fem.* thorax cupreo-viridis; segmentorum margines cuprei: tarsi omnes fusci; metatarsi articulo 1<sup>o</sup>. basi flavo.

*Var. δ.*—*Fem.* thorax omnino viridis: abdomen cyaneo-viride, basi viride: profemora apice et protibiæ rufa, hæ supra fusco vittatae.

*Var. ε.*—*Fem.* abdomen cupreum, utrinque et subtus viride: protarsi fusci.

*Var. ζ.*—*Fem.* viridi-cyaneus: caput viride: abdominis discus cupreus: genua et tarsi omnes flava, hi apice fusci.

*Var. η.*—*Fem.* *Var. ζ.* similis: protibiæ et protarsi fusca: alarum nervi pallidè fusci.

August; on grass beneath trees; near London. September; Isle of White. Wight.

Sp. 2. Syst. *tenuicornis*. Mas et Fem. *Viridis, præcedenti angustior, antennis nigris, pedibus fuscis aut viridibus, alis griseis, nervo humerali ramulum rejiciente brevissimum.*

*Mas.*—Obscurè viridis, quasi minutè squameus: oculi ocellique rufi: antennæ nigræ; articulus 1<sup>us</sup>. viridis: abdomen obscurè æneo-viride, angustum, ferè læve: sexualia nigra: pedes nigro-fusci: coxæ et femora viridia; protibiæ et protarsi fusca; meso- et metatarsi pallidè fusci, apice obscuriores, subtus flavi: alæ griseæ; squamulæ et nervi fusca; stigma parvum; metalarum nervi pallidi.

*Fem.*—Abdomen obscurè viride, ovatum; discus cupreo-viridis: pedes virides; trochanteres nigri; tarsi flavi, apice fusci; protarsi, unguis et pulvilli fusci. (Corp. long.  $\frac{5}{4}$ —1 lin.; alar.  $1\frac{1}{2}$ — $1\frac{5}{4}$  lin.)

June; on grass; Windsor Forest.

†† *Mesothoracis parapsides scuto ferè in unum confusæ.*  
‡ *Antennæ 11-articulatæ.*

#### GENUS IV. EUNOTUS,<sup>d</sup> Walker.

*Mas.*—Corpus convexum, crassum, latum, contractum, quasi squameum, vix pubescens: caput maximum, thorace latius, breve:

<sup>d</sup> εὖ̄ benē, νῶτος dorsum.

antennæ 11-articulatæ, clavatæ, thorace breviores ; articulus 1<sup>us</sup>. linearis, gracilis ; 2<sup>us</sup>. mediocris ; 3<sup>us</sup>. et 4<sup>us</sup>. vix conspicui ; 5<sup>us</sup>. et sequentes ad 8<sup>um</sup>. gradatim longiores et latiores ; clava articulis 8°. et 9°. multò longior et latior, apice quasi truncata : thorax ferè quadratus : prothorax parvus, brevissimus : mesothoracis parapsidum suturæ vix conspicuae ; paraptera et epimera benè determinata ; scutellum ferè rotundum, posticè subproductum et abdominis basin attingens : metathorax supra vix conspicuus : abdomen ferè quadratum, paullò longius quàm latum, quasi subtilissimè squameum ; segmentum 1<sup>um</sup>. maximum, reliqua omnino obtegens et ultra abdominis apicem productum : pedes simplices, graciles, breves : alæ breves, angustæ : nervus alâ dimidio brevior ; humeralis longus ; ulnaris brevis ; cubitalis radiali longior et angulum plerisque hujus familiæ acutiorem fingens.

Sp. 1. Eun. cretaceus. Mas. *Nigro-viridis, antennis fulvo-fuscis, pedibus fuscis, alis subfuscis.*

*Nigro-viridis*, obscurus : oculi ocellique rufo-fusci : antennæ fulvo-fuscae ; articulus 2<sup>us</sup>. obscurè fuscus : abdomen quasi subtilissimè squameum, basi lœve : pedes nigro-fusci ; coxæ virides ; tibiæ pallidè fuscae ; genua tarsique flava, horum articulus 5<sup>us</sup>. unguis et pulvilli fusci : alæ subfuscæ ; squamulæ et nervi fusca ; stigma minimum. (Corp. long.  $\frac{1}{2}$  lin. ; alar.  $\frac{3}{4}$  lin.)

Fem.—Aptera.

June and September ; on chalk cliffs in the Isle of Wight. I found one specimen of the female in the same situation, but have since lost it.

September; Isle of Wight.

Sp. 5. Plat. cincticorne. Mas et Fem. *Præcedentium colore, antennis fulvis, mas; aut pallidè fuscis, fem.; fusco cingulatis.*

*Mas.*—Lætè viride, vix pubescens: oculi ocellique rufi: antennæ fulvæ, corporis dimidio paullò breviiores; articulus 2<sup>us</sup>. basi nigro-fuscus; 6<sup>us</sup>. et sequentes ad 10<sup>um</sup>. basi fuscæ; clava fusca, basi flava: thorax elongato-ovatus: abdomen sublineare, thoracis longitudine sed paullò angustius; discus æneo-viridis: sexualia pallidè fusca: pedes lætè flavi; coxæ virides; protibiæ fulvæ; protarsi pallidè fuscæ; meso- et metapedum tarsi apice, ungues et pulvilli nigro-fuscæ: alæ hyalinæ, albæ; squamulæ et nervi fulva; stigma parvum; metalarum nervi pallidè flavi.

*Fem.*—Paullò gracilins: antennæ pallidè fuscae, corporis dimidio breviiores; articuli basi obscuriores; 1<sup>us</sup>. nigro-fuscus: caput posticè æneo-viride: abdomen viridi-cyanum, elongato-ovatum, thorace paullò longius, subtus angulatum, apice acuminatum non attenuatum; discus æneus: oviductus subexertus: femora fusca, apice flava; protibiæ pallidè fuscae; meso- et metapedum tarsi apice, ungues et pulvilli fuscæ. (Corp. long. 1 $\frac{1}{4}$  lin.; alar. 1 $\frac{1}{2}$  lin.)

May; on grass in fields; near London.

Sp. 6. Plat. terminale. Fem. *Præcedentium colore, P. claro laticorni et prasino abdomine angustiore, P. teliformi abdomine breviore discrepans.*

Lætè viride, vix pubescens: oculi ocellique rufi: antennæ flavæ, corporis dimidio vix longitudine; articulus 3<sup>us</sup>. et sequentes basi obscuriores: thorax elongato-ovatus: abdomen æneum, sublineare, compressum, thorace longius, basi viride, subtus paullò angulatum, apice acuminatum vix attenuatum: pedes lætè flavi; coxæ virides; femora fulva, apice flava; tarsi apice, ungues et pulvilli fulvi: alæ hyalinæ, albæ; squamulæ et nervi pallidè flava; stigma minutum. (Corp. long. 1 $\frac{1}{4}$  lin.; alar. 1 $\frac{1}{2}$  lin.)

August; on grass in fields; near London.

#### GENUS IX.—AMBLYMERUS,<sup>i</sup> *Walker.*

*Fem.*—Corpus crassum, latum, quasi squameum, sparsè pubescens: caput breve, thorace vix latius: mandibulæ 4-dentatae, sub-

<sup>i</sup> Ἀμβλύμερος obtusus, μέρος pars.

quadratæ, paullò arcuatæ, similes, intùs breviores et emarginatæ ; dens externus et 2<sup>us</sup>. mediocre, acuti ; 3<sup>us</sup>. et 4<sup>us</sup>. parvi, obtusi : maxillæ elongatæ, subarcuatæ, acuminatæ, apice angustæ et ciliatæ ; palpi 4-articulati, filiformes ; articuli 1°. ad 3<sup>um</sup>. breves, subæquales ; 4<sup>us</sup>. 2<sup>i</sup>. et 3<sup>i</sup>. longitudine, apice acuminatus : mentum elongato-ovatum, angustum : labium parvum, angustum, quasi fissum ; palpi 3-articulati, filiformes, breves, crassi ; articulus 2<sup>us</sup>. brevissimus ; 3<sup>us</sup>. apice acuminatus : antennæ 13-articulatae, clavatæ, thorace breviores ; articulus 1<sup>us</sup>. gracilis, linearis ; 2<sup>us</sup>. elongato-cyathiformis ; 5<sup>us</sup>. et sequentes ad 10<sup>um</sup>. gradatim breviores et latiores ; clava ovata, plana, articulis 9°. et 10°. latior sed vix longior : thorax ovatus, convexus : prothorax brevissimus : mesothoracis parapsidum suturæ vix conspicuæ ; scutellum ferè rotundum ; paraptera et epimera benè determinata : abdomen ovatum, ferè lœve, subtus carinatum et nonnunquam angulatum, apice acuminatum ; segmentum 1<sup>um</sup>. ferè tridentis longitudine ; reliqua breviora, subæqualia : pedes simplices, latiusculi : alæ plerumque latæ ; nervus humeralis ulnari longior, ramulum rejiciens nullum ; cubitalis radiali dimidio brevior, stigmate ramulum brevissimum emitte terminatus.

Sp. 1. Amb. amænus. Fem. *Viridis aut æneo-cupreus, antennis fuscis, abdomine non subtus angulato, pedibus flavis aut fulvis, alis hyalinis, proalis nonnunquam sub-flavescentibus.*

Lætè viridis, caput thoracis latitudine : oculi ocellique rufi : antennæ fuscæ ; articulus 1<sup>us</sup>. et 2<sup>us</sup>. pallidè rufi : capitis, prothoracis mesothoracisque latera cupreo-viridia : abdomen cupreum, subtus carinatum non angulatum, apice pilosum ; segmenta basi et utrinque viridia : pedes flavi ; coxæ virides ; metatibiae intùs fulvo vittatae ; meso- et metatarsi straminei, articulo 5°., unguibus et pulvillis fuscis ; protarsi articulo 5°. rufo : alæ hyalinæ, latæ ; squamulæ et nervi pallidè flava ; stigma minimum. (Corp. long.  $\frac{5}{4}$ — $1\frac{1}{4}$  lin. ; alar.  $1\frac{1}{2}$ — $2\frac{1}{4}$  lin.)

*Var. β.—Antennæ articulis 3°. ad 10<sup>um</sup>. rufo-fuscis.*

*Var. γ.—Thoracis dorsum cupreo variegatum : abdomen cupreum, basi et utrinque viridi variegatum : metatibiæ omnino flavæ.*

*Var. δ.—Antennæ articulo 2°. rufo : thorax æneo-viridis ; segmentorum margines virides : femora et metapedum tibiæ pallidè rufa.*

*Var. ε.—Abdomen viride, apice cupreum ; discus chalybeo fasciatus : femora, meso- et metatibiæ fulva, apice flava.*

*Var. ζ.*—*Var. ε.* similis : abdomen cupreum, basi æneo-viride.

*Var. η.*—Antennæ articulo 2<sup>o</sup>. supra fusco.

*Var. θ.*—Æneo-viridis : thorax anticè et utrinque cupreus : femora, tibiæ et protarsi pallidè rufa ; meso- et metatibiæ apice flavæ : proalæ sub-nervum ulnarem paullò flavescentes.

*Var. ι.*—*Var. θ.* similis, æneo-cupreus : caput viridi-æneum, anticè et posticè viride.

*Var. κ.*—Thorax æneo-viridis ; scutellum cupreum.

*Var. λ.*—Viridis : thorax posticè æneo-viridis : abdominis segmentum 1<sup>um</sup>. viride, micans.

August; on oak trees, &c. ; near London. September; Isle of Wight.

Sp. 2. Amb. dubius. Fem. *Viridis aut æneus, præcedenti angustior, antennis fulvo fuscis, pedibus fulvis, alis hyalinis vix flavescentibus.*

Lætè viridis, caput thoracis latitudine : oculi ocellique rufi : antennæ fulvæ articuli 1<sup>o</sup>. ad 4<sup>um</sup>. flavi ; clava fusca : abdomen æneum, basi viride nitentius, subtus carinatum non angulatum : pedes fulvi ; coxæ virides ; femora fusca, apice flava ; tibiæ apice flavæ ; mesofemora subtus ante apices setâ validâ armata ; tarsi apice, unguis et pulvilli fusi : alæ hyalinæ, minimè flavescentes ; squamulæ et nervi pallidè fusca ; stigma minimum. (Corp. long.  $\frac{5}{4}$ —1 lin. ; alar.  $1\frac{1}{4}$ — $1\frac{1}{2}$  lin.)

*Var. β.*—Antennæ fuscæ ; articulus 1<sup>us</sup>. omnino et 2<sup>us</sup>. subtus flavi : femora apice fulva ; metatibiæ fuscæ, apice flavæ ; tarsi et protibiæ flava, illi apice fusi.

*Var. γ.*—Æneus : abdomen basi viride, apice cupreum, segmenta apice nigro-ænea : pedes fulvi ; coxæ æneæ ; metafemora inermia? ; meso- et metatarsi flavi, apice nigro-fusi.—Species distincta.?

*Var. δ.*—*Var. γ* similis : abdomen nigro-æneum, basi apiceque viride.

August; near London. September; Isle of Wight.

Sp. 3. Amb. validus. Fem. *Æneus, viridi et cupreo variegatus, antennis fuscis, abdome subtus angulato, pedibus fulvis, alis hyalinis, nonnunquam subflavescentibus.*

Cupreo-æneus : caput æneum, posticè æneo-viride, thorace paullò latius : oculi ocellique rufo-fusi : os pallidè flavum : antennæ fuscæ ; clava obscurior ; articulus 1<sup>us</sup>. pallidè rufus : abdomen

nigro-aeneum, subtus angulatum, basi cupreo-aeneum nitentius : pedes fulvi ; propedes flavi ; coxae aeneae ; unguis et pulvilli fusti ; meso- et metapedum genua et tarsi pallidè flava, hi apice fusti : alæ subflavescentes : squamulae fulvae ; nervi pallidiores ; stigma minutum. (Corp long. 1— $1\frac{1}{4}$  lin. ; alar.  $1\frac{1}{4}$ — $1\frac{3}{4}$  lin.)

*Var. β.*—Caput et thorax obscurè cupreo-aenea, illum posticè viride : abdomen cupreo-viride, basi nitentius ; discus nigro-aeneus : alæ vix subflavescentes.

*Var. γ.*—Æneus : caput viride : antennæ pallidè fuscæ ; articulus <sup>1<sup>us</sup>. flavus : abdomen nigro-aeneum, basi viride nitentius ; segmenta apicalia viridescentia : coxae virides ; profemora fulva : alæ omnino perlucidæ.</sup>

August; near London. New Lanark, Scotland.

### ART. XXVIII.—*Entomological Society.*

SEVENTH SITTING.—APRIL 7.

WE observed Dr. Ure among the strangers present.

The PRESIDENT informed the meeting that Mr. Walker and Mr. Newman had withdrawn their names from the council of the Society, and that it was necessary that the vacancies thus occasioned in the council list be filled up by the Society. The council had met on the subject, and had agreed to propose to the meeting the name of Mr. Hanson, instead of Mr. Walker, and the name of Dr. Roget, instead of Mr. Newman.

The SECRETARY read letters from M. Wiedemann and M. Lefebvre, who had been elected honorary members of the Society.

The SECRETARY read a paper by Mr. Spence, detailing a curious mode, adopted in Italy, of excluding the house-fly from houses. The plan consisted simply in straining a net, made of white thread, across the aperture of an open window: the meshes of the net were about half-an-inch in diameter. It had occurred to Mr. Spence, whether it could be the dread of a spider's-net which caused the flies to avoid this thread-net, but on consideration he had determined otherwise, and he was
